

IL6 inhibitors in PMR/GCA

Interleukin 6 (IL 6) inhibitors (tocilizumab and sarilumab) are used to treat rheumatoid arthritis since 2010 and polymyalgia rheumatica (PMR) and giant cell arteritis since . These diseases cause high levels of inflammation that is susceptible to inhibition of IL6.

How are biologics dosed in PMR and in GCA?

Sarilumab for PMR:

Tocilizumab IV for GCA:

Tocilizumab SC for GCA:
